

User Acceptance Testing (UAT)

Testing Phase

Date	27-08-2026
Project Name	Automated Network Request Management in ServiceNow

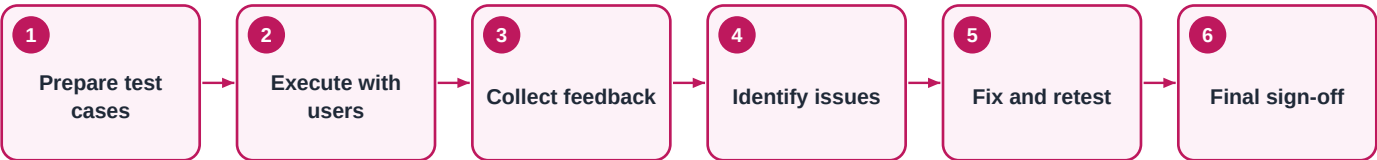

User Acceptance Testing confirms that the Automated Network Request Management system meets the business requirements and gives end users a simple, reliable experience. Testers run each scenario below and record the actual outcome.

Note: The Result column is left blank on purpose. Fill it with Pass or Fail from your own test run; do not submit results you have not executed.

UAT Objectives

- Users can submit network requests successfully and all required details are captured
- Approval and rejection workflows behave correctly
- Network records are created accurately
- Email notifications are generated at the right stages
- Request status updates and closure work as expected
- The system is easy and convenient for end users
- Defects are found and user feedback is collected
- The solution satisfies the project requirements

UAT Process

UAT Test Cases

ID	Test case	Test steps	Expected result	Req.	Result
UAT-01	Open catalog	Log in to the portal and open the Network Request item	Catalog item opens successfully	FR01	
UAT-02	Fill request form	Enter connection type, device details and requester information	Required information is captured; mandatory fields enforced	FR02, 03	
UAT-03	Submit request	Click Submit on the completed form	Request is submitted and confirmed	FR01	
UAT-04	Record creation	Open the network request table after submitting	Network record is created with correct values	FR05, 07	
UAT-05	UI policies	Select device type "Others" and change other options	Extra field appears; fields follow the selections	FR04	
UAT-06	Approve request	Approver opens the approval and approves	Request moves to Approved state	FR06	
UAT-07	Reject request	Approver rejects a submitted request	Request moves to Rejected state	FR06	
UAT-08	Email notification	Check the mailbox after each stage	Appropriate notification is generated	FR09	
UAT-09	Fulfilment update	Network team opens the task and updates progress	Team can update the request and changes are saved	FR08	
UAT-10	Close request	Mark the completed work as done	Completed request is closed successfully	FR10	
UAT-11	Reports	Open the request report	Request information is displayed correctly	NFR04	
UAT-12	End-to-end workflow	Run one request from submission to closure	Full lifecycle works correctly	FR01-10	

Acceptance Criteria

The system is accepted when:

- All critical UAT scenarios pass
- Request information is captured accurately
- Approval and rejection processes work as expected
- Notifications are generated correctly
- Records are updated throughout the lifecycle
- Major defects are resolved and retested
- Users confirm they are satisfied
- Stakeholders give final approval
