

Project Planning

Project Planning Phase

Date	27-08-2026
Project Name	Automated Network Request Management in ServiceNow

The project is organized into nine phases, from requirement analysis to final deployment. Each phase has a clear set of activities and an expected outcome, so progress can be checked at the end of every phase.

1. Phase Roadmap

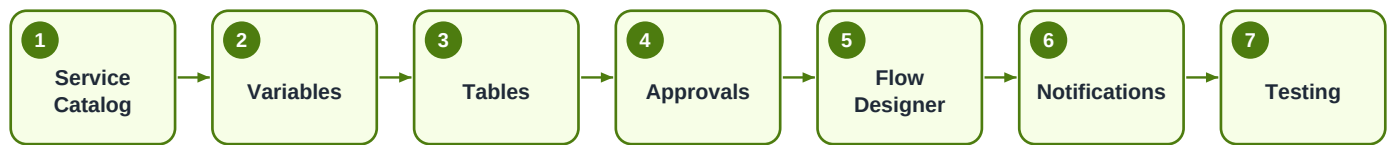

2. Phase Activities and Outcomes

Phase	Activities	Expected outcome	Planned dates
1. Requirement analysis	Identify network request problems, user needs and system requirements	Defined project requirements	
2. Ideation and planning	Brainstorm possible solutions and prioritize the best idea	Automated network request solution selected	
3. System design	Prepare the problem-solution fit, user stories, data flow diagram, architecture and technology stack	Complete system design	
4. Service catalog development	Create the Network Request catalog item and configure its variables	Functional request form	
5. Application and data setup	Create tables, fields and request-related records	Structured data storage	
6. Workflow development	Configure Flow Designer with record creation, approvals, logic, notifications and updates	Automated request workflow	
7. Testing	Submit sample requests and test approval, rejection, notifications and record updates	Verified system functionality	
8. Documentation	Capture implementation details, screenshots, results and project outcomes	Complete project documentation	
9. Final deployment	Review the application and make sure all components work together	Ready-to-use solution	

The Planned dates column is left blank on purpose. Enter your own schedule for each phase.

3. Implementation Sequence

4. Phase Groups

Group	Phases	Focus
Plan	1 to 3	Understand the problem, choose the idea and design the system
Build	4 to 6	Develop the catalog form, data structure and automated workflow
Verify and deliver	7 to 9	Test, document and deploy the finished solution

5. Project Documents by Phase

Phase	Documents produced
Requirement analysis	Customer Journey Map, Solution Requirements
Ideation and planning	Brainstorming and Idea Prioritization, Define the Problem Statement, Empathy Map
System design	Problem-Solution Fit, Proposed Solution, Solution Architecture, Data Flow Diagram and User Stories, Planning Logic
Testing	User Acceptance Testing

Delivery sequence: Service Catalog → Variables → Tables → Approvals → Flow Designer → Notifications → Testing.
